

## Tracking XML Results from Query String

This document gives you the information necessary to generate Tracking data in XML format. Send the move values in a query string on the URL <http://www.towneair.com/xmlTracking> using the parameters described in the table below. The results will be returned via XML. Additionally, the XML results are described below.

### Query String Parameters

Parameter	Explanation
username	Your townear.com username
password	Your townear.com password
number	The shipment number. This may be the TAF probill, sticker, pickup, or a reference number.

**Note** All the parameters stated above are required.

**Example** <http://www.towneair.com/xmlTracking?username=UNAME&password=PASSWORD&number=201010101>

### XML Results – As Billing Party

If the username entered contains the billing account for which the shipment number is billed the following XML results will be displayed. These results display all data including charges and scanned documents. Within the root element of tracking is the standard move information along with any W&R information, appointment data, charges, move statuses, reference numbers and scanned documents (both supporting documents and delivery receipts).

```
<tracking>
  <probill>201089858</probill>
  <current_status>HOLD AND NOTIFY</current_status>
  <current_status_terminal>GRR</current_status_terminal>
  <origin_terminal>GRR</origin_terminal>
  <destination_terminal>GRR</destination_terminal>
  <origin_name>AIT WORLDWIDE GRR</origin_name>
  <origin_address/>
  <origin_city>GRAND RAPIDS</origin_city>
  <origin_state>MI</origin_state>
  <origin_zip>49512</origin_zip>
  <destination_name>DAVID SAWINSKI</destination_name>
  <destination_address>HOLD AND NOTIFY</destination_address>
  <destination_city>GRAND RAPIDS</destination_city>
  <destination_state>MI</destination_state>
  <destination_zip>49503</destination_zip>
  <wr_redim_line>
    <wr_qty>1</wr_qty>
    <wr_length>40</wr_length>
```

### XML Error Example

Below is an example of an error being returned. It too has a root element of simple\_quote, but the only child element is error which contains a descriptive error message.

```
<simple_quote>
  <error>
    The Linehaul Points were not found in our points list
  </error>
</simple_quote>
```
